

Asphalt cutters

Mechanical work tool 2-33 tonnes

Precision cutting in utility and landscaping work

The asphalt cutter is ideal for preparing the ground ahead of a cable and pipe installation. It is popular to use under the tiltrotator for that extra dimension of control and precision of the area to cut, keeping edges well-defined, and without removing material unnecessarily.

In addition to the efficient cutting of asphalt, the design makes precision cuts on lawns possible, leaving tidy incisions. Perfect to have in the set of work tools for compact excavators doing landscaping work.
