

Gripper cassette – 4 fingers

Accessory 7-33 tonnes

When used correctly, an integrated gripper is an amazing tool that increases your productivity dramatically.

The aim of the four finger gripper has been to increase safety when handling objects. Greater contact surfaces allow you to get a better grip.

The gripper opens widely, closes almost entirely, has robust cylinder covers and does not interfere with excavation. Naturally, it can be retrofitted.

Technical specification

| | | | |
